

INTRUDER DETECTION

Deep Alert is an intelligent surveillance solution that enhances CCTV monitoring by filtering out 95% of false alarms, while continuously evolving through real-world video data.

Its cloud-based platform ensures secure, reliable surveillance, enabling real-time threat detection, remote monitoring, and advanced object tracking.

It seamlessly integrates with leading video management systems, and in most cases, there is no need for additional hardware.

A subscription-based monitoring fee per camera offers cost-effective deployment.

FEATURES

- **Granular Configuration:** Allows for customisation of zones, rules, and alert schedules.
- **Intruder & Vehicle Detection:** Detects people and vehicles for early warning of unauthorised access.
- **Guard Management:** Alerts when guards are absent or out of position.
- **Suspicious Activity Alerts:** Identifies unusual behaviour at monitored sites.
- **Object Counting:** Tracks the number of occupants or items in restricted areas to maintain compliance and security.
- **Virtual Guard Tours:** Automates camera-based inspections on a set schedule.
- **Thermal & PTZ Camera Integration:** Supports advanced detection using thermal and PTZ cameras.
- **Connectivity:** Seamless integration with major video management platforms.
- **Fast Data Speeds:** Efficient data handling without compromising system performance.
- **Linked to a 24/7 Security Operations Centre (SOC):** Continuous analysis with human oversight from a centralised, state-of-the-art security operations centre.

BENEFITS

- 01. False Alarm Filtering**
Through advanced analytics, the software filters out 95% of false alarms, allowing the SOC team to focus on genuine security threats and enabling faster, more effective security responses.
- 02. Enhanced Operational Efficiency**
Streamlines security processes through automation, centralised monitoring, and intelligent guard management.
- 03. Cost Effective & Scalable**
Provides flexible, subscription-based pricing on a per-camera, per-month basis, with full compatibility across existing hardware for cost-effective and scalable deployment.
- 04. Reliable System Performance**
Maintains uptime and performance with proactive camera health monitoring and resilient cloud infrastructure.
- 05. Customisable & Integrated Security**
Adapts to specific site needs with granular settings and seamless integration into existing video management system (VMS) platforms.
